CLARCOR Industrial Air Launches New SmogHog® SHM Media Mist Collector Designed for the Metalworking Industry

- *PEACH® saturated depth coalescing media uses 3 airflow paths to remove over 99% of contaminants.*
- *New password protected, touchscreen technology make the SHM easy to operate, maintain and service.*
- *Save significant energy costs using Auto Flow Control technology to optimize system performance without the use of mechanical dampers or variable frequency drives.*

Overland Park, Kansas — CLARCOR Industrial Air introduces a new media mist collector under the most recognized and trusted brand in mist collection, SmogHog. This system, the [SHM SmogHog Media Mist Collector](#), engineered for the metalworking industry uses a three stage filtration process that progressively reduces the mist concentration resulting in greater than 99% particle removal efficiency.

The primary filter features PEACH saturated depth coalescing filter cartridges or optional fiberglass bags depending on the needs of the application. The proprietary PEACH filter technology is a revolutionary coalescing filter media that utilizes a 100% synthetic blend of layered fibers and creates three distinct airflow paths increasing the virtual area. The increased airflow of the filter results in increased capacity and removal efficiency for extended periods of time. The media is incorporated into a patent pending filter arrangement that maximizes filter area and allows simple service and maintenance.

“Customers are really excited about the benefits of the filter design and PEACH media”, stated Travis Haynam, Senior Product Manager at CLARCOR Industrial Air, “but customers are even more enthusiastic about the touchscreen controller and Auto Flow technology, which simplify product operation and maintenance while delivering energy savings.”

With over 50 years of mist collection experience, SmogHog engineers created a configurable, self-contained mist collection solution that can be mounted directly onto machining centers or mounted remotely connecting a single or multiple machines with ducting. The SHM can be configured in a multitude of ways aligning the filter technology and cabinet configuration to match customer's unique needs.

To learn more about this mist collection system, how the PEACH media works, options and accessories and our additional SmogHog electrostatic precipitator solutions, visit us online at www.uasinc.com.

About CLARCOR Industrial Air

Optimize the performance and profitability of your plant, manufacturing operation, or product through the expertise of CLARCOR Industrial Air. CLARCOR Industrial Air reintroduced the BHA brand, the industry's most well-known and respected name – widely recognized for a broad range of air filtration products as well as in-depth customer knowledge and service capabilities. We design, test and manufacture industrial air filters engineered for use in heavy industry applications such as rock dust, power generation, manufacturing and metal production for in-process dust collection and air pollution control.

United Air Specialists (UAS) is now part of CLARCOR Industrial Air, the same company that provides BHA aftermarket filtration products. The combined business brings you better technology, products and service. CLARCOR Industrial Air is committed to providing clean air solutions that protect employees, improve plant performance and enable you to realize your operating goals by delivering systems that remove mist, smoke and fumes from industrial processes as well as superior filtration products. For more information visit www.uasinc.com.

With nearly 50 years' experience, our experts have in-depth customer knowledge and service capabilities which help you improve your operation and achieve your operating goals. We are here to provide you with answers, training, and a quick response, beyond delivery. For more information, visit www.CLARCORindustrialair.com.
